Expert rating (AgBB scheme).....	19

## Overview of the samples

eco-sample number	Sample designation	Condition of the sample at the time of delivery	Sample type
A001	Wildspitze Organoid Decoration Coating	No complaints	Material sample

**Note:** The investigation results refer exclusively to the provided test object. The validity of the test report is max. three years. The test report loses its validity immediately with change of the composition or the production method of the test object. Publishing of the complete test report or excerpts of it requires approval.

## Test Report

### 1 Emission analyses

#### 1.1 Volatile Organic Compounds (VOC)

<b>Definition of terms:</b> VOC (Volatile Organic Compounds)	All individual substances with concentrations $\geq 0,001 \text{ mg/m}^3$ in the retention range $C_6$ (n-hexane) to $C_{16}$ (n-hexadecane) For substances, refer to the NIK list /AgBB
TVOC (Total Volatile Organic Compounds)	Sum of all individual substances in the retention range $C_6$ to $C_{16}$ .
TVOC <sub>tol</sub> (Total Volatile Organic Compounds)	Sum of all VOC in the retention range $C_6$ to $C_{16}$ as toluene equivalent (according to DIN ISO 16006-6)
KMR-VOC (carcinogenic, mutagenic, toxic-for-reproduction VOC, WOC, and SVOC)	All individual substances with the following classifications: Regulation (EC) No. 1272/2008: Categories Carc. 1A and 1B, Muta. 1A and 1B, Repr. 1A and 1B TRGS 905: K1 and K2, M1 and M2, R1 and R2 IARC: Group 1 and 2A DFG MAK list: Category 1111 and 1112
VVOC (Very Volatile Organic Compounds)	All individual substances with concentrations $> 0,001 \text{ mg/m}^3$ in the retention range $< C_6$
TVVOC (Total Very Volatile Organic Compounds)	Sum of all VVOC in the retention range $< C_6$
SVOC (Semi-Volatile Organic Compounds)	All individual substances $> 0,001 \text{ mg/m}^3$ in the retention range $> C_{16}$ (n-hexadecane) to $C_{22}$ (docosane)
TSVOC (Total Semi-Volatile Organic Compounds)	Sum of all SVOC in the retention range $> C_{16}$ to $C_{22}$
Identified and calibrated substances ( $C_{id \text{ sub}}$ ), calculated substance-specific	Spectrum and retention time coincide with the calibrated comparison substance
Not identified substances, calculated as toluene equivalent ( $C_{ni \text{ tol}}$ ) SER	Suggestion from the spectra library with high probability or association with a substance group
NIK value	Specific emission rate (refer to the appendix) Lowest interesting concentration; calculation value for rating of VOC, established by the committee for health rating of building products (AgBB)
R-value	For each substance accounted for in the test chamber air, the quotient of concentration and NIK value is obtained. The sum of the quotients obtained in this way is the R-value.

**Note:** The investigation results refer exclusively to the provided test object. The validity of the test report is max. three years. The test report loses its validity immediately with change of the composition or the production method of the test object. Publishing of the complete test report or excerpts of it requires approval.

**List of the analyzed volatile organic compounds:****Aromatic hydrocarbons**

Toluol  
Ethylbenzol  
p-Xylol  
m-Xylol  
o-Xylol  
Isopropylbenzol  
n-Propylbenzol  
1,3,5-Trimethylbenzol  
1,2,4-Trimethylbenzol  
1,2,3-Trimethylbenzol  
2-Ethyltoluol  
1-Isopropyl-4-methylbenzol  
1,2,4,5-Tetramethylbenzol  
n-Butylbenzol  
1,3-Diisopropylbenzol  
1,4-Diisopropylbenzol  
Phenylloctan  
1-Phenyldecan<sup>2</sup>  
1-Phenylundecan<sup>2</sup>  
4-Phenylcyclohexen  
Styrol  
Phenylacetylen  
2-Phenylpropen  
Vinyltoluol  
Naphthalin  
Inden  
Benzol  
Kresol

**Saturated aliphatic hydrocarbons**

2-Methylpentan<sup>1</sup>  
3-Methylpentan<sup>1</sup>  
n-Hexan  
Cyclohexan  
Methylcyclohexan  
n-Heptan  
n-Octan  
n-Nonan  
n-Decan  
n-Undecan  
n-Dodecan  
n-Tridecan  
n-Tetradecan  
n-Pentadecan  
2-Methyl-1-propanol  
1-Butanol  
1-Pentanol  
1-Hexanol  
n-Hexadecan  
Methylcyclopentan  
1,4-Dimethylcyclohexan

**Terpenes**

δ-3-Caren  
α-Pinen  
β-Pinen  
Limonen  
Longifolen  
Caryophyllen  
Isolongifolen  
alpha-Phellandren

Myrcen  
Camphen  
alpha-Terpinen  
Longipinen  
beta-Caryophyllen  
beta-Farnesen  
alpha-Bisabolen

**Aliphatic alcohol and ether**

1-Propanol<sup>1</sup>  
2-Propanol<sup>1</sup>  
tert-Butanol  
Cyclohexanol  
2-Ethyl-1-hexanol  
1-Octanol  
4-Hydroxy-4-methyl-pentan-2-on  
1-Heptanol  
1-Nonanol  
1-Decanol

**Aromatic alcohol (phenols)**

Phenol  
BHT (2,6-di-tert-butyl-4-methylphenol)  
Benzylalkohol  
Glycols, glycol ether, glycol ester  
Propylenglykol (1,2-Dihydroxypropan)  
Ethylenglykol (Ethandiol)  
Ethylenglykolmonobutylether  
Diethylenglykol  
Diethylenglykol-monobutylether  
2-Phenoxyethanol  
Ethylencarbonat  
1-Methoxy-2-propanol  
Texanol  
Glykolsäurebutylester  
Butylidiglykolacetat  
Dipropylenglykolmono-methylether  
2-Methoxyethanol  
2-Ethoxyethanol  
2-Propoxyethanol  
2-Methylethoxyethanol  
2-Hexoxyethanol  
1,2-Dimethoxyethan  
1,2-Diethoxyethan  
2-Methoxyethylacetat  
2-Ethoxyethylacetat  
2-(2-Hexoxyethoxy)-ethanol  
1-Methoxy-2-(2-methoxy-ethoxy)-ethan  
Propylenglykol-di-acetat  
Dipropylenglykol  
Dipropylenglykolmonomethyletheracetat  
Dipropylenglykolmono-n-propylether  
Dipropylenglykolmono-t-butylether  
1,4-Butandiol  
Tripropylenglykolmonomethylether  
Triethylenglykoldimethylether  
1,2-Propylenglykoldimethylether  
TXIB (Texanolisobutytrat)  
Ethylidiglykol  
Dipropylenglykol-dimethylether  
Propylencarbonat  
Hexylenglykol  
3-Methoxy-1-butanol

1,2-Propylenglykol-n-propylether  
1,2-Propylenglykol-n-butylether  
Diethylenglykol-phenylether  
Neopentylglykol

**Aldehyde**

Butanal<sup>1,3</sup>  
Pentanal<sup>3</sup>  
Hexanal  
Heptanal  
2-Ethylhexanal  
Octanal  
Nonanal  
Decanal  
2-Butenal<sup>3</sup>  
2-Pentenal<sup>3</sup>  
2-Hexenal  
2-Heptenal  
2-Undecenal  
Furfural  
Glutaraldehyd  
Benzaldehyd  
Acetaldehyd<sup>1,3</sup>  
Propenal<sup>1,3</sup>  
Propenal<sup>1,3</sup>  
Isobutenal<sup>3</sup>  
2-Octenal  
2-Nonenal  
2-Decenal

**Ketones**

Ethylmethylketon<sup>3</sup>  
3-Methyl-2-butanon  
Methylisobutylketon  
Cyclopentanon  
Cyclohexanon  
Aceton<sup>1,3</sup>  
2-Methylcyclopentanon  
2-Methylcyclohexanon  
Acetophenon  
1-Hydroxyaceton

**Acids**

Essigsäure  
Propionsäure  
Isobuttersäure  
Buttersäure  
Pivalinsäure  
n-Valeriansäure  
n-Caprinsäure  
n-Heptansäure  
n-Octansäure  
2-Ethylhexansäure

**Esters and lactones**

Methylacetat<sup>1</sup>  
Ethylacetat<sup>1</sup>  
Vinylacetat<sup>1</sup>  
Isopropylacetat  
Propylacetat  
2-Methoxy-1-methylethylacetat  
n-Butylformiat  
Methylmethacrylat  
Isobutylacetat

1-Butylacetat  
2-Ethylhexylacetat  
Methylacrylat  
Ethylacrylat  
n-Butylacrylat  
2-Ethylhexylacrylat  
Adipinsäuredimethylester  
Fumarsäuredibutylester  
Bernsteinsäuredimethylester  
Glutarsäuredimethylester  
Hexandioldiacrylat  
Maleinsäuredibutylester  
Butyrolacton  
Glutarsäurediisobutylester  
Bernsteinsäurediisobutylester  
Dimethylphthalat  
Texanol

**Chlorinated hydrocarbons**

Tetrachlorethen  
1,1,1-Trichlorethan  
Trichlorethen  
1,4-Dichlorbenzol

**Others**

1,4-Dioxan  
Caprolactam  
N-Methyl-2-pyrrolidon  
Octamethylcyclotetrasiloxan  
Methenamin  
2-Butanonoxim  
Triethylphosphat  
5-Chlor-2-methyl-4-isothiazolin-3-on  
2-Methyl-4-isothiazolin-3-on (MIT)  
Triethylamin  
Decamethylcyclopentasiloxan  
Dodecamethylcyclohexasiloxan  
Tetrahydrofuran (THF)  
1-Decen  
1-Octen  
2-Pentylfuran  
Isophoron  
Tetramethylsuccinonitril  
Dimethylformamid (DMF)  
Tributylphosphat

1 WVOC

2 SVOC

3 Analyse gem. DIN ISO 16000-3

**Note:** The investigation results refer exclusively to the provided test object. The validity of the test report is max. three years. The test report loses its validity immediately with change of the composition or the production method of the test object. Publishing of the complete test report or excerpts of it requires approval.

**Explanation for the specific emission rate SER**

Emission measuring is done in test chambers under defined physical conditions (temperature, relative humidity, room loading, air exchange rate, etc.).

Test chamber measuring results can be compared directly only when the investigations were made under the same boundary conditions.

When the differences of the physical conditions refer only to the air exchange rate and/or the loading, the "SER" (Specific Emission Rate) can be used for the comparability of the measuring results. The SER specifies the number of volatile organic compounds (VOC) discharged by the sample per unit and hour (h).

The SER can be calculated according to the following formula for each proven individual component of the VOC from the data in the test report.

Possible material units are:

l = Unit of length (m)	refers the emission to the length
a = Unit of area (m <sup>2</sup> )	refers the emission to the area
v = unit of volume (m <sup>3</sup> )	refers the emission to the volume
u = unit of pieces	refers the emission to the complete unit

The different dimensions for the SER result from this:

length-specific	SER <sub>l</sub> in µg/m h
area-specific	SER <sub>a</sub> in µg/m <sup>2</sup> h
volume-specific	SER <sub>v</sub> in µg/m <sup>3</sup> h
unit-specific	SER <sub>u</sub> in µg/u h

The SER thus represents a product-specific rate, describing the mass of the volatile organic compounds emitted by the product per unit of time at a specific point in time after the start of the test.

SER = q•C

q: Specific air flow rate (quotient of air exchange rate and loading)

C: Concentration of the measured substance(s)

Instead of in micro-grams (µg), the result also may be stated in milligrams (mg), with 1 mg = 1000 µg.

Note: The investigation results refer exclusively to the provided test object. The validity of the test report is max. three years. The test report loses its validity immediately with change of the composition or the production method of the test object. Publishing of the complete test report or excerpts of it requires approval.

**Test method:**

Preparation of the test body:	DIN EN ISO 16000-11	
	Date:	04.04.2014
	Pretreatment:	Not applicable
	Sealing of the rear:	Yes
	Sealing of the edges:	100 %
	Ratio of open edges to the surface:	Not applicable
	Loading:	Referred to the area
	Dimensions:	
Test chamber conditions:	According to DIN ISO 16000-9	35.4 cm x 35.4 cm
	Chamber volume:	
	Temperature:	0.125 m <sup>3</sup>
	Relative humidity:	23 °C
	Air pressure:	50 %
	Air:	Normal
	Air exchange rate:	Cleaned
	Free-stream wind speed:	0.50 h <sup>-1</sup>
	Loading:	0.30 m/s
	Specific air flow rate: Air sampling:	1.00 m <sup>2</sup> /m <sup>3</sup> 0.5 m <sup>3</sup> /m <sup>2</sup> · h 3 and 28 days after test chamber loading
Analytics:	DIN ISO 16000-3	
	DIN ISO 16000-6	
	Determination limit:	1 µg/m <sup>3</sup>

## Expert rating (AgBB scheme)

The product **Wildspitze Organoid decoration coating** was subjected to a product test on order by **Organoid Technologies GmbH, Fließ**.

The basis for the rating is the "Scheme for health evaluation of VOC and SVOC emissions from building products of the committee for health evaluation of building products (AgBB) (level: 2012).

The results documented in the test report are rated as follows:

Test parameter	Result	Requirement	Requirement met [Yes/No]
<b>Emission analyses</b>			
<b>Measuring time: 3 days after test chamber loading</b>			
Total VOC (C <sub>6</sub> -C <sub>16</sub> )	0.290 mg/m <sup>3</sup>	≤ 10 mg/m <sup>3</sup>	Yes
Total carcinogens (EU category 1A and 1B)	< 0.001 mg/m <sup>3</sup>	≤ 0.01 mg/m <sup>3</sup>	Yes
<b>Measuring time: 28 days after test chamber loading</b>			
Total VOC (C <sub>6</sub> -C <sub>16</sub> )	0.105 mg/m <sup>3</sup>	≤ 1.0 mg/m <sup>3</sup>	Yes
Total SVOC (C <sub>16</sub> -C <sub>22</sub> )	< 0.001 mg/m <sup>3</sup>	≤ 0.1 mg/m <sup>3</sup>	Yes
R-value (dimension-less)	0.19 mg/m <sup>3</sup>	≤ 1	Yes
Total VOC without NIK	0.003 mg/m <sup>3</sup>	≤ 0.1 mg/m <sup>3</sup>	Yes
Total carcinogens (EU category 1A and 1B)	< 0.001 mg/m <sup>3</sup>	≤ 0.001 mg/m <sup>3</sup>	Yes

### Overall rating:

The product **Wildspitze Organoid decoration coating** satisfies the emission requirements of the AgBB scheme.

Cologne, 07.05.2014

Ralph Nitsche
